

SBK Assembly kit for one tube distribution manifold 2000 / 3000

On account of constructional factors it is not always possible to install a separate supply distributor and return distributor. Therefore we have in our program the kits for one tube distributor manifold 3000 and 2000. With these kits the distributors can be mounted in a line. The overall heights amount in series 3000 to 80 mm and in series 2000 to 75 mm.

The assembly kit consists of:

Connection block diagonally drilled with O-ring	1 pcs.
Intermediate 5 mm black with O-ring	1 pcs.
Intermediate plate 2 mm black	1 pcs.
Nuts M8x20 galvanized	2 pcs.

Additionally a wall fastener or a cabinet fastener 75 mm high is required (item no. 6.013.029).
The series 3000 and 2000 distinguish itself only by the type of connection blocks.

Installation information:

Screw in the threaded bars M8 in the connection block.
Defer the required supply manifold segments in its sequence.
Defer the intermediate plate 5 mm black with O-ring (attend the position of the O-ring).
Defer the number of the required return segments.
Defer the intermediate plate 2 mm black.
Defer the Connection block diagonally drilled.
Screw on with the nuts M8x20.
