

MULTIZONE 3000

HEATING MANIFOLD

Multizone 3000 · Multizone 3000 · Multizone 3000 · Multizone 3000 · Multizone 3000

A further development of the proved "Multicompact 3000"

The flexible distribution manifold systems made of plastic for sanitary and heating

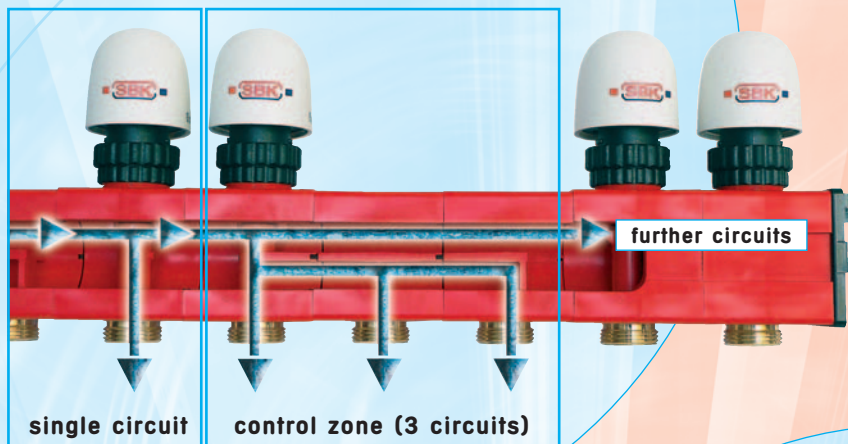

MULTIZONE 3000 HEATING MANIFOLD

The SBK-Multizone 3000 can easily combine 2 or 3 heating circuits into one control zone due to its modular nature. The hydraulic balancing of the heating circuits remains possible by the flowmeters in the return module. Your advantage: less material and installation effort because of the reduced components and wiring.

CONTROL ZONES

Water flow by the control with control zones

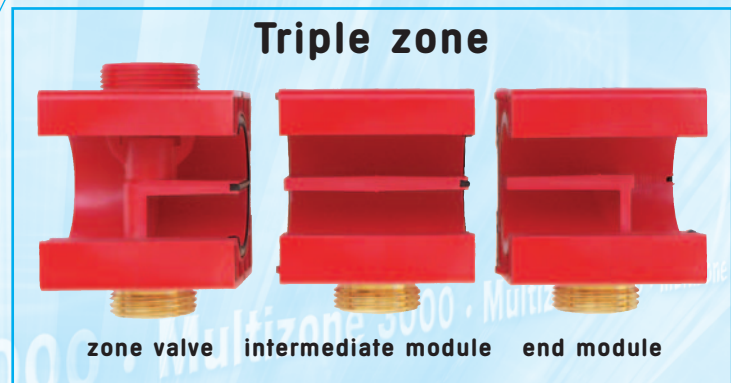

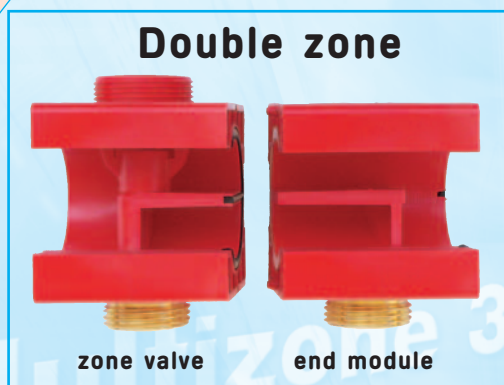

The SBK-Multizone 3000 has all proven abilities, advantages and quality characteristics of the Multicompact-program:

- Single modules made of fibreglass reinforced plastic, consequently corrosion and ageing resistant
- Self-insulating through integrated air chambers
- Temperature resistant from -20°C to +90°C

MODULES

The zone function is based on 3 different modules
